- ◆ Geotechnical Engineering
- ◆ Site Planning and Engineering
- ◆ Solid Waste Management
- ◆ Structural Engineering
- ◆ Surveying
- ◆ Subsurface Utility Engineering
- ◆ Telecommunications Engineering
- ◆ Utilities/Civil Engineering

As road and highway systems become more congested, the role of the traffic engineer takes on increasing significance and need. Draper Aden Associates' Transportation Team has the experience to approach each project to obtain effective solutions to meet transportation goals and community concerns. By working with residents and local and state partners, we ensure that effective transportation options are provided to move people and goods throughout the region.

Transportation "harmonization" - the philosophy of combining livable community goals and transportation goals - plays an important part of our Transportation Team's project approach. Traffic harmonization is more than just putting in speed bumps to slow vehicles down. The goal is to "calm" the higher speed traffic, while not impeding traffic flow of the other drivers. Traffic calming is just one aspect of harmonization. Traffic circulation, streetscapes, and wayfinding signage are other elements that have an impact on community life.

Clients using our services include developers; zoning attorneys; universities and medical institutions; municipalities; industrial development and parking authorities; and downtown retail and neighborhood organizations.

Our Transportation Team provides a wide array of study and design disciplines to complement our other core services. Our team coordinates with the other resources of the firm to provide a strong, comprehensive planning team capable of evaluating any transportation mode or policy.
