

Advancing Asset Management in Your Utility: A "Hands-On" Workshop

Managing infrastructure to obtain the most cost effective performance is a challenge faced by all water and wastewater professionals. On **March 10-11**, Virginia Tech will host a workshop to provide information about a comprehensive approach to managing capital assets. The workshop will include a step-by-step, hands-on approach to effectively transfer advanced asset management concepts, tools and techniques to the water and wastewater industry, and more specifically, into your agency.

Advancing Asset Management in Your Utility: A "Hands-On" Workshop will be held on the campus of Virginia Tech in **Blacksburg, VA** and will feature **Steve Albee**, USEPA Project Director and primary author of *The Clean Water and Drinking Water Infrastructure Gap Analysis*, and **Duncan Rose**, Technical Director of GHD and co-author of WEF's textbook, *Managing the Water and Wastewater Utility*. These trainers will demonstrate a comprehensive approach to managing capital assets.

The workshop agenda is built around five core asset management questions and will focus on demonstrating, step by step, how an agency would select and deploy "**Best Appropriate Asset Management Practices**" that are most suitable for your individual agency. Attendees will participate in exercises that will demonstrate modern concepts, techniques and tools of advanced asset management.

Registration deadline is February 23, 2009. For more information about the workshop go to www.cpe.vt.edu/epaaam/index.html.
